

W I S H A T ?

Over 70% of the fish population are fully used, used or depleted, according to UN-FAO. Among those, the European Eel is one of the most affected species. Its population has in fact been collapsing since the 1980s. Declared "Critically Endangered" by ^{*}IUCN's Red List.

^{*} International Union for Conservation of Nature

THE EUR OPEAN EEL

E W H Y I S I T E N D A N G E R E D ?

Overfishing

The natural habitat of the European eel is degrading because of the pollution of estuaries and the construction of dams.

THERE ARE SOLUTIONS !

- improving water quality
- facilitating aquaculture
- reducing & regulating fishing
