

WHAT  
IS  
IT ?

a little brown frog  
living in Western  
Europe rain forests

it is the most en-  
dangered amphibian  
species in  
F r a n c e

# THE MOOR FROG

WHY IS IT  
ENDANGERED?  
Their terres-  
trial and aqua-  
tic habitat is  
threatened by  
the drying and  
loss of  
wetlands and  
by the  
pollution  
induced by  
agricultural  
and industrial  
practices

THERE  
ARE  
SOLUTIONS !

- Restoring its habitat (marsh, wet afforestation) especially his flora (roselières, bétulaies à sphaignes)
- Stop using dangerous pesticides
- Stop eating frogs, dear French friends ;)
